

What is claimed is:

1. A method of treating thrombosis in a mammal comprising: administering to said mammal a synergistically therapeutically effective amount of a combination of (i) a Factor Xa inhibitor, and (ii) a compound selected from the group consisting of aspirin, TPA, a GPIIb/IIIa antagonist, low molecular weight heparin and heparin, wherein the dose administered for at least one of (i) and (ii) is a subtherapeutic dose.

2. A method of Claim 1 wherein the combination of (i) and (ii) provides a synergistic effect.

3. A method of Claim 2 wherein (ii) is aspirin.

4. A method of Claim 2 wherein (ii) is TPA.

5. A method of Claim 2 wherein (ii) is a GPIIb/IIIa antagonist.

6. A method of Claim 2 wherein (ii) is a low molecular weight heparin.

7. A method of Claim 2 wherein (ii) is heparin.

8. The use of a combination of (i) a Factor Xa inhibitor, and (ii) a compound selected from the group consisting of aspirin, TPA, a GPIIb/IIIa antagonist, low molecular weight heparin and heparin for the manufacture of a medicament for the treatment of thrombosis.
